Procedural synthetic cohort
250 generated geometries
150 train / 50 validation / 50 test
CT-derived geometry cohort
27 CT case-record geometries
18 train / 3 validation / 6 test
Shared observation structure: 4 loads × 3 calibrated views × 7 frames
Single-inclusion material targets and all motion are synthetic
CT test: 120 scenes within 6 geometry clusters, not 120 anatomies
