Common-input response regressors on 50 held-out synthetic cases
A
Background modulus
Development-fixed criterion 15%
Median case-level error (%)
B
Inclusion ratio
Development-fixed criterion 25%
C
Region center
Development-fixed criterion 10%
D
Region radius
Development-fixed criterion 12%
Pop
R
PLS
ET
PCR
E
Cases meeting each criterion
E_b 18% 98% 94% 98% 94%
Ratio 32% 68% 66% 52% 68%
Center 26% 79% 71% 40% 88%
Radius 40% 64% 40% 52% 64%
Cases within criterion (%)
F
PCA–Ridge vs Ridge
E_b
Ratio
Equal error
PCA–Ridge case error (%)
Ridge case error (%)
Key: Pop = Training-population prior · R = Ridge · PLS = Partial least squares · ET = ExtraTrees · PCR = PCA–Ridge (primary)
